

## O2S Series Single Gravimetric Control

### Brief Description

The CT systems dosing control system is a closed-loop control for the OB Series gravimetric dosing and blending unit for 1 dosing unit.

Data entry can be made during production. Operation is menu-driven and can be password protected.

The Control offers graphical and numerical display of the operation parameters of the entire installation. In the event journal, all changes in the settings and all alarm messages are time stamped.

- CT Systems dosing control systems are completely maintenance-free and designed for 7 day, 24-hour operation.

Orbetron dosing control systems meet the European CE and UL listed requirements.

Textual Screen Display

Operating voltage: 110-380Vac 50/60 Hz

Menu driven

Storage of dosing factors and/or refill limits

Line modes: Local Set point, Material level adjustment by analog input extruder RPM

Feeder totalizer/line totalizer

Local or line mode of dosing station

Digital and analog I/O available upon request

Host interface available on request (Profibus, Modbus, Ethernet)

UPS available upon request

UL upon request
