

PRESS RELEASE

Orbetron, LLC, Introduces our OBB-R (Retrofit) Package for Batch Blenders, to Improve Low Dosage Metering

January 4/3/18

Cumberland, RI – Orbetron, LLC is located at 45 Industrial Rd., Suite 208, Cumberland, RI 02864.

Orbetron's New **OBB-R** batch blending retrofit package, allows processors in Injection Molding and Extrusion that use batch blenders the flexibility to retrofit from the standard slide or auger components to Orbetron's disc feeders for a better dosing accuracy of the minor components.

The new OBB-R uses Orbetron's disc feeder technology that comes in 4 sizes 50, 100, 150, 200 Series. The specific series that is chosen is dependent on rate requirements. The adaptation of the disc feeding technology improves dosing accuracy over the standard slide or auger technologies.

Orbetron can retrofit both new and existing batch blenders from most manufactures. The ability to upgrade your current batch blenders can save processors money by extending the life of your initial investment, while improving dosing accuracy.

Retrofits typically are designed to improve dosing accuracy of the minor components, but can also be designed for all components that require low rate batch blending.

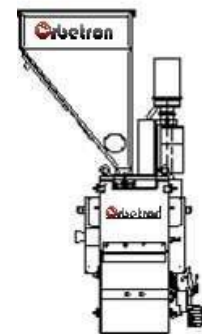

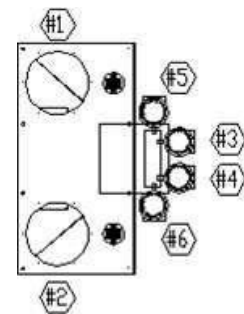

If processors need to expand to 6 components you can utilize the Orbetron controls to upgrade a standard 4 component batch blender to a 6 component, this allows for faster change overs and greater dosing abilities.

Advantages

- Compact design dosing feeder
- Easy Cleaning (no more material bins to clean)
- Quick material change overs
- High temp operation
- Go from air activation to motor activation (multiple RPM's available)
- Dust tight dosing feeders
- Feeding capability in grams
- Reduce cost by converting a 4 station blender into 6 component with electrical upgrade
- Loader integration
- Use existing controls or upgrade your controls

New batch blender conversion from 4 to 6 components

About Orbetron, LLC

Orbetron, LLC sales, engineers, services and manufactures feeding and blending equipment for the following industries, Plastics, Pharma, Food, Agriculture, Chemical, and Health & Beauty.

Our feeding products are the most versatile in the industry.

Orbetron can feed both dry bulk materials and liquid materials to give processors a complete feeding partner.

Orbetron continues to partner with industry OEM's to private label, and design feeding equipment for resale and specific applications.
