

OC50 Controllers

Description

Orbetron designs both volumetric and gravimetric controllers for multiple industries. The software is designed to allow for modifications based on the application requirements with communication capability. Orbetron offers 3 basic controllers for the disc feeder technology.

Options

OC50 is our standard volumetric controller for all feeders using our stepper motor configuration. Our controller utilizes 4.3" HMI color touch screen for easy configuration of parameters. The small controller size is easy to install next to your feeder for easy operator access. Our software allows for both batching and continuous feeding capability for bulk and liquid materials.

OC350 is our standard volumetric controller for up to 3 feeders using our stepper motor configuration. Our controller utilizes 7" HMI color touch screen for easy configuration of parameters. The controller size is easy to install next to your feeders for easy operator access. Our software allows for both batching and continuous feeding capability for bulk and liquid material.

OC50L is our standard gravimetric controller for all feeders using our stepper motor configuration. Our controller utilizes 7" HMI color touch screen for easy configuration of parameters. The controller size is easy to install next to your feeder for easy operator access. Our gravimetric software allows for continuous feeding capability for bulk and liquid materials.
